Enhancing Catalog Searching with Geospatial Technology
March 2012 update:

• The license was acquired and the software was installed for the Metacarta georeferencing tool.
• A list of Harvard’s geospatial experts and other project stakeholders has been compiled to begin to discuss system architectural design.
• Initial collections for georeferencing have been identified and will include a selection of records from: the Map Collection, the Thomas Hollis collection of Houghton Library, and the Judaica Collection.
• Met with DPLA representatives to plan testing of DPLA metadata and potential ways of integrating a geospatial search user interface with the DPLA platform. Obtained a set of DPLA metadata records to analyze and test.
